Body text with [link](#) and [rollover state](#).

Coyote’s wordmark is monochromatic plain text and its icon is created by removing all but two letters within the name. The remaining o’s suggest a pair of eyes, a reference to the vision-oriented goal of describing images for the visually impaired and the story after which Coyote is named.

Note: please don’t combine the Coyote wordmark with the Coyote icon, and use the icon primarily only in instances where a profile image is required or the wordmark is illegible. Please don’t edit, modify, distort, rotate, or recolor the wordmark or icon.

Welcome to Coyote

Coyote is a tool for quickly annotating images built for the [Museum of Contemporary Art Chicago](#).

While Coyote’s primary goal is to be the canonical holder of image description, it does not strive nor is meant to be the canonical holder of image data or metadata not related to description. Coyote offers role-based logins to facilitate a workflow approach towards image description. To this end, those who are administrators may approve, assign, and review descriptions. When users log in, they are presented with a queue-based interface for authoring descriptions that they have been assigned. Realizing that image description is a context-sensitive process, Coyote offers content creators the ability to author both multiple types and multiple instances of a single type of description per image. In addition, a tagging interface exists to assist in search and organization activities within the interface.

Welcome to Coyote,
Tobey Albright!

Explanation: Task instruction should be concise and easy to follow so as to not overwhelm the user, but sufficiently detailed to enable users to complete the task efficiently and effectively. Terms, abbreviations and interactive elements should be clearly explained, and jargon should be avoided.

APPROVEREJECTEDIT

Nicholas Photinos performing *Petits Artéfacts*
CAPTION from MCA Chicago

☐

A video still of a white man in early middle age is playing a cello without a bow. He is seated on a chair in front of a black music stand. The casually dressed man is focused on the music in front of him. To his right, a laptop and video monitor is sitting on a table with the monitor screen facing the viewer. And additional monitor screen is facing forward at the man’s feet. Many black cords are hanging from the monitors onto and across the wooden floor of the otherwise bare room.
